Claims 1-8 are pending in this application. Applicant's election of Group I (claims 1-3), as well as specie Zelan033 in Paper No. 6 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Acronyms and abbreviations should be written out or defined in the first claim in which they appear. Therefore, "GIT" as recited in claim 1 should be rewritten as "gastro-intestinal tract (GIT)".

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Lobie et al. (JOURNAL OF ENDOCRINOLOGY, (1993 Dec.) 139 (2) 371-82).

Lobie et al. clearly teach a monoclonal antibody against a GIT transport receptor. Please see throughout the disclosure for Mab 218 which was generated against the rabbit mammary gland prolactin receptor. Mab 218 was used to study the distribution of the prolactin receptor in

the rabbit gastrointestinal tract (GIT). In the GIT, the most intense immunoreactivity was associated with the oesophageal epithelium, chief (zymogenic) cells of the fundic mucosa, pancreatic islets of Langerhans and surface epithelial cells of the duodenum and jejunum.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Lobie et al. (ENDOCRINOLOGY, (1990) 126 (1), 299-306).

Lobie et al. clearly teach the use of immunohistochemistry to define the cellular distribution of GH receptors in the gastrointestinal tract (GIT) and its derivatives.

Immunohistochemistry was performed in the adult rat GIT with a panel of characterized monoclonal antibodies to the GH receptor. The most intense and heterogenous immunoreactivity was observed in epithelial cell subpopulations of GIT mucosa.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Laurie Scheiner, whose telephone number is (703) 308-1122. Due to a flexible work schedule, the examiner's hours typically vary each day. However, the examiner can normally be reached Monday thru Friday.
